

## DOTLINE LIVE!

### What is it?

Dotline LIVE! provides a multi-client application to monitor your CTPs in real time. In addition to all relevant status information of each CTP, you'll get an overview to the current product produced by the machine. Receive those information anywhere, on any PC within your company network.

### What's my benefit?

It's now no more necessary to stand beside the machine to get the information you want.

- ☑ Actual status information of each CTP (e.g. how many plates of certain type are still loaded)
- ☑ Real time exposure information\*
- ☑ Full production line information (also processor and punch- bender)
- ☑ True man less production → your operator may be anywhere
- ☑ Unlimited number of connected clients
- ☑ History of exposed files and their exposure result.
- ☑ In case of errors, see the message before you go to the machine and save time (e.g. if you know in advance that the cassette is empty, directly take filled one from the storage with you)
- ☑ TML communication with WOBE workflows for real time update. This concerns also other workflow manufacturers who integrate this interface.

\*requires Dotline ImCon Version 18 or newer running on CTP

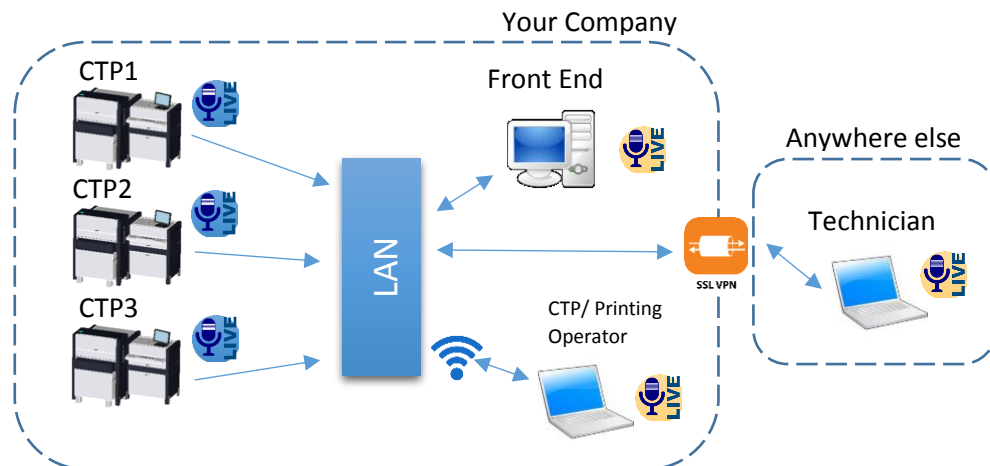

### How does it work?

A small application installed (📄) on each CTP is sending its data via TCP protocol. All these data can be received by multiple clients (👤) running anywhere in your LAN

#### Requirements:

Supported OS: 🖥️ Windows 7, 8.1, 10 32/64bit

- ⇒ LAN access to each CTP from the client PC
- ⇒ LibTML binary distribution (free download) installed on host and client PCs

### Prices and Licensing

Dotline LIVE is part of the *Dotline Advanced Customer Care* (DACC) Program, covered by the CTPs Machine Client (MC) license without any extra costs.
